Color Key

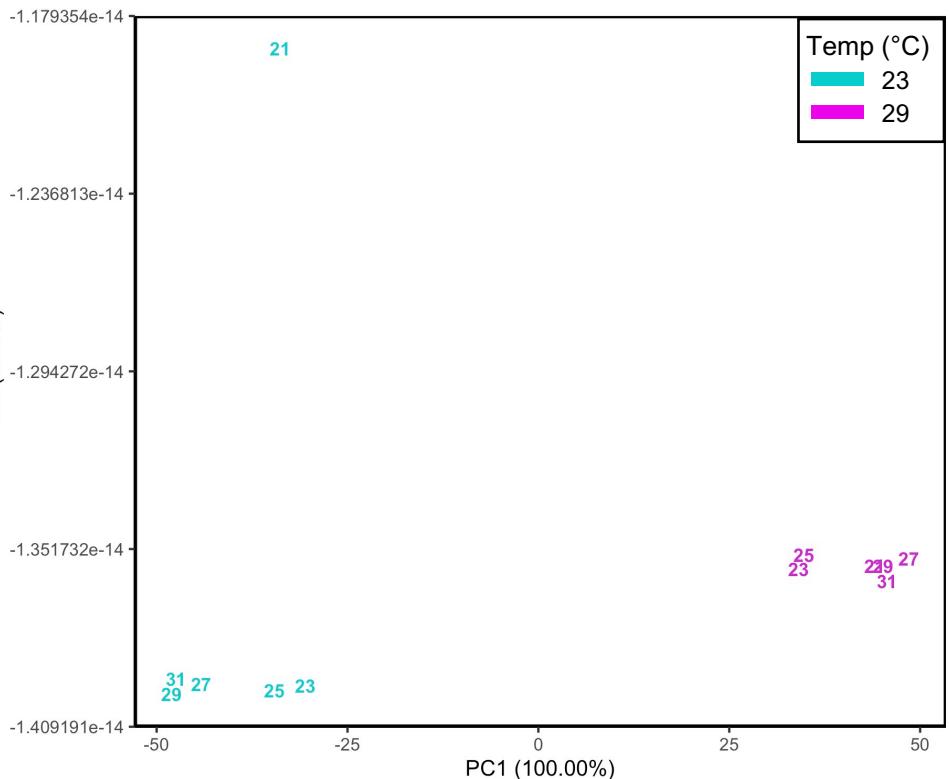

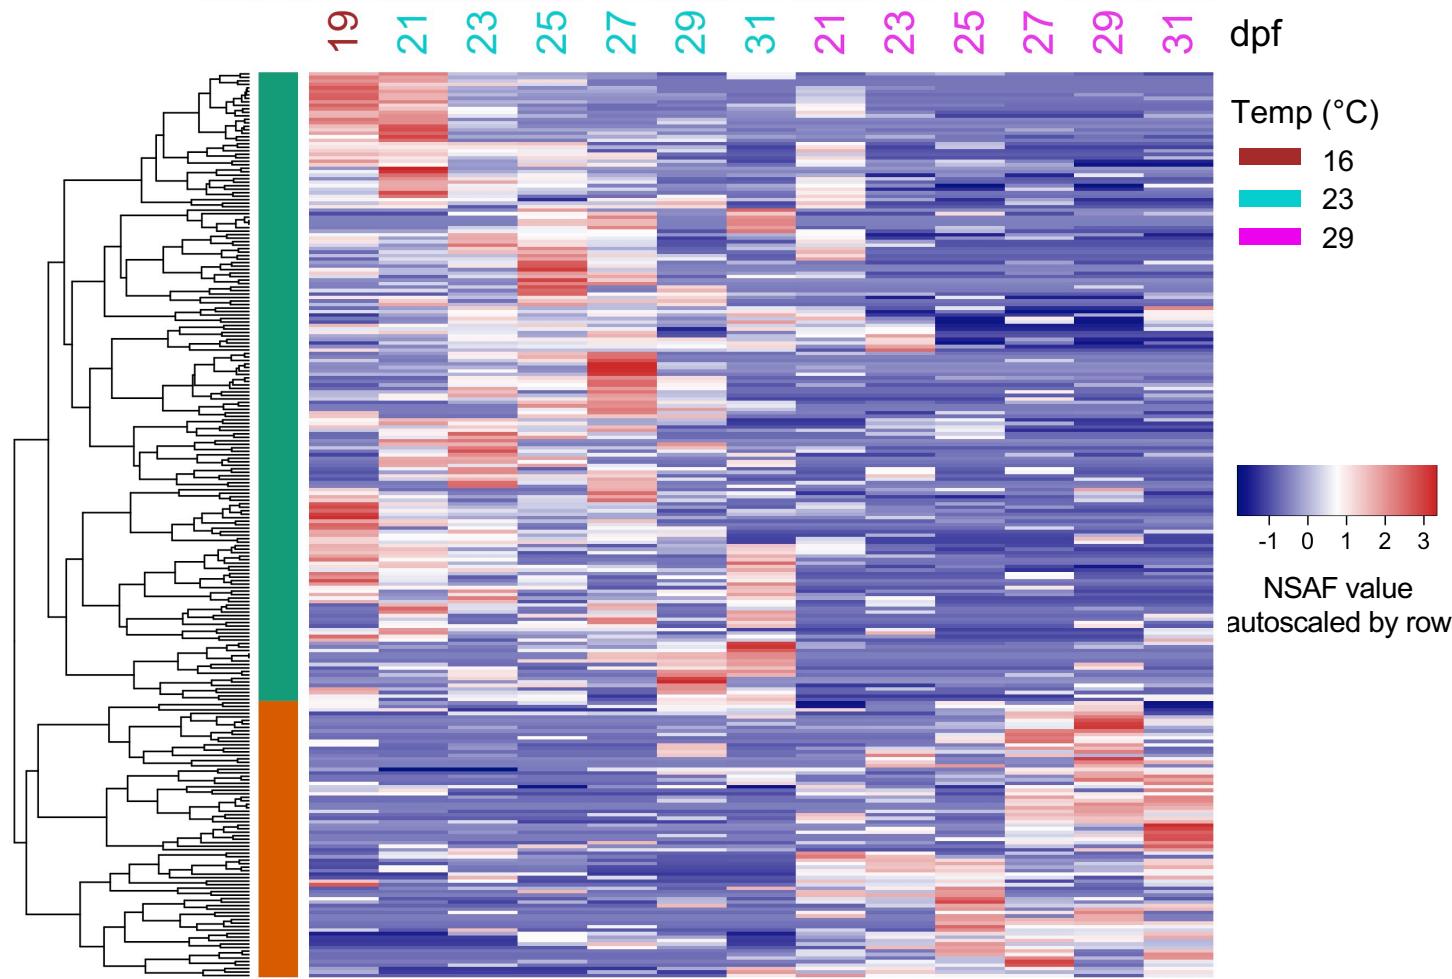

Number of enriched
GO terms

clade

cell junction organization
cell death
cytoskeleton-dependent intracellular transport
extracellular matrix organization
mitochondrion organization
tRNA metabolic process
ribosome biogenesis
chromosome organization
circulatory system process
nucleobase-containing compound catabolic process
cellular nitrogen compound metabolic process
cellular component assembly
catabolic process
cofactor metabolic process
lipid metabolic process
protein-containing complex assembly
carbohydrate metabolic process
plasma membrane organization
nervous system process
generation of precursor metabolites and energy
cell morphogenesis
cellular protein modification process
signal transduction
immune system process
nucleocytoplasmic transport
cell adhesion
cellular amino acid metabolic process
response to stress
cytoskeleton organization
growth
cell proliferation
biosynthetic process
small molecule metabolic process
embryo development
anatomical structure formation involved in morphogenesis
cell motility
locomotion
transport
vesicle-mediated transport
secondary metabolic process
reproduction
protein folding
pigmentation
autophagy
cell-cell signaling
membrane organization
cell differentiation
anatomical structure development
